

# Project Diagnostic

The ProjectLEADER® Challenge – On your marks, get set, go! Go evaluate project team readiness.

---

## Introduction

---

Tough projects challenge the skills and abilities of project teams and leaders and your processes. In both training and organization development, you are challenged to identify the gaps between skills and requirements. A project leadership reaction course will test whether team members need additional training or experience. This workshop will be technology-neutral with evaluations formal, informal or 360°.

We believe adults learn experientially – they learn by doing. Consequently, we developed ProjectMAN® simulations. These simulations force participants to develop project management controls within a workshop to illustrate the systems and processes their own project management system requires.

ProjectMAN® simulations force people to complete projects as teams. Teams execute projects. Projects are human intensive and human factors make or break projects. This is the opportunity to build quality concepts into the project process.

It may be the only opportunity because it is too late to make much change after a project starts. Time creates enough stress that anything requiring additional effort gets thrown overboard.

We developed this project assessment model during the Tenth Pan American Games to prepare teams of volunteers to operate multiple venues. These experiential team tests helped attain real world class results.

Participants will conduct an observed and evaluated simulation. Then, they would generalize their experience to an upcoming project. This workshop would lead into Project Launch: Chartering, Scope Definition – Plan-to-Plan, and strategic and detailed project planning.
